Insights Summary

- The dataset shows a total of **1,000 trades** across multiple asset classes, with an average settlement time of **2.1 days**, aligning with industry benchmarks.
- **69% of trades** were successfully settled within the target window, reflecting strong operational efficiency.
- **10% of trades failed**, primarily concentrated in **FX instruments**, suggesting potential areas for process improvement or automation.
- **Bond trades** demonstrated the fastest settlement rate, while **Equity trades** had slightly longer processing times.
- Data validation and conditional formatting ensured accuracy, allowing clear visibility into outliers and delayed settlements.
- The interactive slicers and timeline enable dynamic filtering by asset type and trade date, providing stakeholders real-time insights into performance trends.
- Overall, this dashboard supports proactive decision-making for investment operations by highlighting key efficiency drivers and bottlenecks in the trade lifecycle.
